Bristol Myers Squibb Rte de Perreux 1 2017, Boudry, Switzerland

August 09, 2024

Dear Sir/Madam,

I am writing with great enthusiasm to apply for the Clinical Scientist Intern position at Bristol Myers Squibb. As a recent PhD graduate in Food Biotechnology from ETH Zurich, I am deeply passionate about translating scientific research into tangible improvements in human health. This internship represents a pivotal opportunity for me to transition my expertise in gut microbial biotechnology into the realm of clinical research, an area I have been eagerly pursuing.

A bit about myself: my journey in scientific research has been driven by a fundamental desire to make a difference in people's lives. During my doctoral studies, I focused on understanding the intricate relationships between vitamins B9 and B12 and the human gut microbiome. This experience not only trained to develop skills in experimental design and data analysis but also ignited a passion for seeing scientific discoveries translated into practical applications and spreading scientific findings through peer-reviewed publications.

I am particularly drawn to this internship for several reasons:

- 1. Opportunity to Learn: Despite my extensive research background, I recognize that clinical science presents unique challenges and methodologies. I am eager to immerse myself in this new environment, learning about every aspect of clinical trials from protocol development to data interpretation.
- 2. Relevant Skill Transfer: My experience in handling complex biological experiments, analyzing large datasets, and communicating scientific findings aligns well with the responsibilities outlined in the internship description. I am confident that these skills will allow me to contribute meaningfully while rapidly adapting to the clinical research setting.
- 3. Alignment with Career Goals: This internship represents a crucial stepping stone in my aspiration to become a clinical scientist. The hands-on experience and mentorship offered at Bristol Myers Squibb are exactly what I need to bridge the gap between my academic background and a career in clinical research.
- 4. Company Culture and Mission: Bristol Myers Squibb's commitment to transforming patients' lives through science resonates deeply with my personal and professional values. I am inspired by your innovative approach to drug development and eager to be part of a team that is at the forefront of medical advancements.

I understand the challenges of transitioning into clinical research without prior experience, which is why I am approaching this opportunity with utmost dedication and a willingness to learn. My background in studying complex biological systems, combined with my adaptability and passion for impactful research, positions me to bring a unique perspective to your team.

Thank you for considering my application. I am genuinely excited about the possibility of contributing to Bristol Myers Squibb's important work and gaining invaluable insights into clinical research in Switzerland. I look forward to the opportunity to discuss how my background, skills, and enthusiasm can contribute to your team's success.

Sincerely,

Palni Kundra
